Short Task

Create the following program and name it 'TelDirectory'. Your program should display the following menu:

1. Enter details
2. Display details
3. Display tel/mob of particular person
4. Exit

This menu is to be repeated until the user enters the number 4. For option 1 the program should ask the user to enter a list of names, their locality and tel or mobile number. For option 2 the program should display all the details. For option 3 the program should ask the user to give you a name and, if the name is found in the list, locality and tel/mobile of person should be displayed. If the name is not found in the list, 'Person not found' should be displayed. We have covered most of this program in class. You have to put it together and turn it in.
