School Marks Project

- Ask user to enter number of students in class
- Declare 3 arrays – Names, Marks, Grades
- Display this menu in side 'do…while' loop:
    1. Enter Student Details
    2. Display Student Details
    3. Display Statistics (total marks, average, highest, lowest)
    4. Display list of students above average
    5. Display details of particular student
    6. Exit
- Switch
    1. case 1: loop and instructions to ask the user to enter name and mark of student. Work out and store grade. Work out total, average, highest, lowest.
    2. case 2: loop and instructions to display list of names, marks and grades
    3. case 3: output details
    4. case 4: output list of names with mark greater than average mark
    5. case 5: ask user for name. Search for name in array, if found display mark and grade
    6. case 6: default
- Do while loop stops when 6 is entered.
